DATE: 25 February 2011

Community Notification

QAL will be carrying out planned maintenance on the Thermal Oxidiser odour destruction system from this evening Monday 28 February until Tuesday afternoon 1 March 2011.

Odour in the plant is generated from the Digestion section where decayed organic matter in the bauxite is broken down during the refining process. The Thermal Oxidiser works by burning the non-condensable gases at a very high temperature, therefore eliminating the odour.

During the maintenance period there may be increased odour from the refinery, however the work being carried out will increase the long term performance of the Thermal Oxidiser.

For further information, please contact the Community Relations hotline on free call 1800 181 110.
